

LAMP GUARD MODEL MC200Y

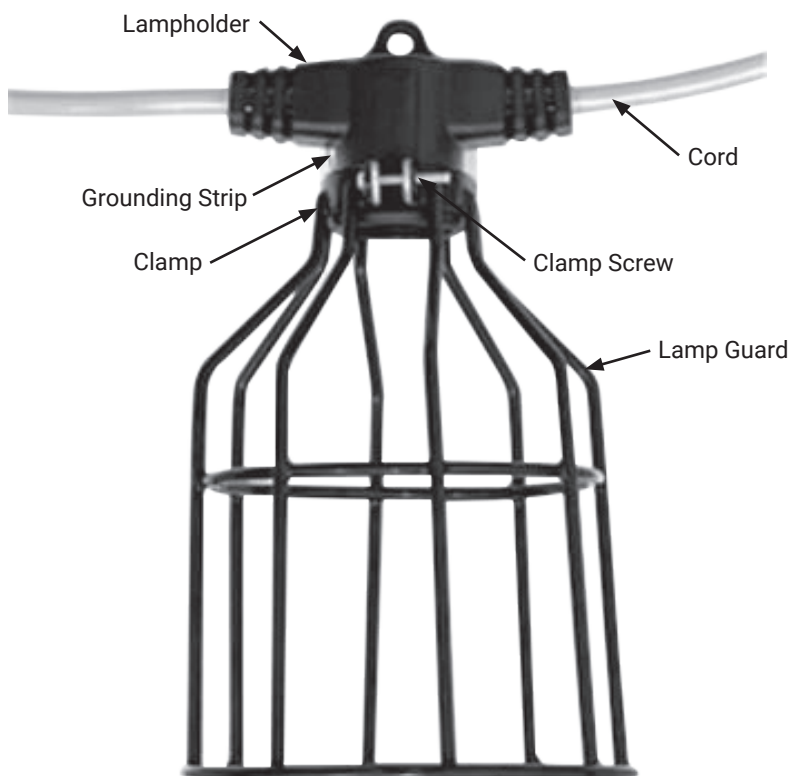

Figure 1

1. Scope

These instructions describe the proper method for attaching lamp guards to these temporary light strings. Complete adherence to these instructions is required before the product may be energized.

2. Safety Information

- ⚠ Disconnect power before assembly or maintenance.
- ⚠ Use only the lamp guards supplied with this product.
- ⚠ Ensure all guards are securely attached before energizing the string.
- ⚠ Ensure proper electrical bonding/grounding connection is made as described in Section 4.

3. Assembly Instructions

- Loosen clamp screws slightly; do not remove.
- Place clamp in designated clamp area (see Figure 1).
- Align the lamp guard so that the clamping screws are roughly parallel the cord.
- Verify that the brass grounding strip is positioned between the clamp and the lampholder – this ensures automatic ground connection.
- Tighten screws evenly just until the lamp guard cannot be rotated or detach under moderate hand pressure; do not overtighten.

4. Verification

- Confirm lamp can be installed/removed without interference.
- Confirm brass strip is secured between the clamp and lampholder body and ground continuity is established.
